

Software Engineer
Electronic Knowledge Interchange Company Chicago, IL

Lead complete software development lifecycle for information worker applications based on Microsoft technologies.

Job Duties:

Responsible for architectural design, web parts development, management and troubleshooting with a focus on planning, deploying and supporting enterprise SharePoint implementations.

Design and development of web applications, using scientific analysis and mathematical models to predict and measure outcome and consequences of design specifically using algorithm analysis/design and Object-Oriented principals and design patterns.

Develop and direct software testing, validation procedures, performance tuning and testing.

Work independently with client users and executives to expand the use of SharePoint to address business issues.

Analyze information to determine, recommend and plan installation of a new system or modification of an existing system.

Requirements:

Candidate must demonstrate the grant of a Bachelor's degree in Computer Science of Computer Systems Engineering or a related field.

The position requires three (3) years of experience as a Software Architect.

Within the three years, must have experience using the following computer languages and programming tools: C#, SharePoint, ASP .NET, XML, HTML, Web services, SQL Server. Must also have Microsoft Certified Professional Certification.

The position includes long-term on-site deployment activities at customer locations when required for project completion.

We offer a competitive salary and benefits package. If you are interested in applying for the career opportunity listed above, please e-mail your resume to us at: recruiting@eki-consulting.com and reference "SOFTENG0715" in the subject line.
