

Process Velocity

Process velocity measures the speed (time) of the process. The faster the pace, the greater the value can be created. The faster the process the faster the process converts cash outflow to cash inflow. The time value of money concept says money received today is better than money received in the future. Some processes have much greater urgency for increasing their velocity than other processes, but they are all connected.

At EKI-Digital, we are committed to Unlocking The Power Of Digital Business — Running through our organization is a strong sense of obligation to serve stakeholders who count on us to solve complex business challenges through LeanDigital™. With a 20-year legacy of innovation, our technology independence allows EKI-Digital to offer flexible and unique solutions to help clients move from uncertainty into possibility.
